The software package provides direct access to all complex 3D content and its tools, such as rendering of models, curves, and meshes of surfaces. With Rizom-Lab software you can get: * Quality 3D visualization of photorealistic models of real objects, from almost any source format - 3D-object formats such as 3ds, obj, x, glf, skp, m3d, mesh or stl* Quality 3D rendering and visualization of real objects from a few clicks - you can transform 2D image and 3D object into real objects or into 2D images* Geometric manipulations - you can simply transform, cut, erase, add, join and animate geometries of 2D and 3D objects, add/modify/remove special effects to them* Support for thousands of 3D models of real objects, 3D environments, 3D space models from different sources - models of real objects, environments, spacecraft, planets, people, cities, buildings, trees, mountains and more. (Source is CATS) * The project is actively developed. To learn more about Rizom-Lab and get the latest news about updates and releases, please visit the official page at: www.rizom-lab.com In the latest version, the editor has been extended to use all the new changes in the new version of Unity. Added support for instantiated prefabs and instantiated prefab meshes. Added setting for exporting prefabs/mesh as JSON or OBJ and more. This project is a collection of C# scripts that implement some basic functions and behaviors for a simple space game. This is not a complete game and a lot more features will be added in the future. Developed in Unity, a powerful game engine for developing both 2D and 3D games. The game engine is written in C#, a modern object-oriented programming language. Unity is a complete suite of tools for 3D development, including a 3D editor, a 3D rendering engine, a game physics engine, a 2D scene and effects system, a 2D and 3D built-in game controller, tools for interfacing with external APIs, and a scripting language.
